RIGHT HAND PCD W/ BACKING SEGMENT (BLACK)

RIGHT HAND PCD W/ BACKING SEGMENT (BLUE)

THIS ACCESSORY IS IDEAL FOR:

Designed for medium removal of hard coating & waterproofing membrane. The backing segment prevents the PCD from digging/gouging deep into concrete. However, it will slow down the removal rate on thicker coatings. Leaves a medium texture and medium scratch marks on the surface. If needed, at the end of job to reduce scratch marks in concrete and make concrete smoother try go back over concrete with DYMA-DOTS and/or DYMA-SEGS.
Example, a customer tried removing a coating using Dyma-Dots and Dyma-Segs did not remove the coating then they may want to step up to trying the PCDs, just warn customer of how the concrete might look after using the PCD, but they should be able to smooth it out after. Some jobs may require use of various accessories to achieve desired results.

Durability:
PCDs should approximately last 10,000 square feet

-RIGHT Hand Directional meaning this accessory is directional when used on the machine.

***note: if the double dyma dots and dyma segs do not remove coating then it might be time for PCDs**
